TITLE OF INVENTION: A NOVEL RECEPTOR-TYPE TYROSINE KINASE
TITLE OF INVENTION: AND USE THEREOF
NUMBER OF SEQUENCES: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE CHARACTERISTICS:
LENGTH: 983 amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:

therapy etc.

Claim 6; Fig 1; 58pp; English.

This sequence represets human eph/elk-like kinase (HEK). HEK is expressed in both pre-B cells and T cell lines and in a number of tumours of human origin, eg. lymphoid tumours LK63, Lila-1 and JM, and the epithelial tumour HeLa. This receptor-type thymidine kina (TK) and/or its ligands are useful as agents in modulation of the
                                                                                                                                          Receptor-type tyrosine kinase reactive with monoclonal antibody III-A4 - is EPH-ELK-like kinase, useful for phosphorylating proteins in modulating pre-B, B and T cell function, in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer; expression vector; extracellular domain; human; HEK; eph/elk-like; kinase; pre-B; cell; T; tumour; lymphoid; LK63; Lila-1; JM; epithelial; HeLa; receptor-type; thymidine kinase; TK; ligand; B;cellular response; growth; differentiation.

Pred. No.

No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed.

derived by analysis of the total score distribution.

This is a partial sequence of human sperm specific antigen 4.1. The sequence was deduced from a cDNA clone (see X06777) isolated from a human testicular cDNA ilbrary using marmoset 4.1 cDNA as probe. A full-length sequence for protein 4.1 is provided in 48380. Human and marmoset sperm proteins 4.1 and 6.7 (see W88373-80) and nucleotide sequences (see X06772-79) encoding them are new. The proteins are sperm specific and can be used in a contraceptive vaccine to prevent or reduce fertility in a subject without the autoimmune reactions that are a serious side-effect of without the autoimmune reactions that are a serious of vectors and

This is a full-length sequence of human sperm specific antigen 4.1 The sequence was deduced from a cDNA clone (see X06777) isolated from a human testicular cDNA library using marmoset 4.1 cDNA as probe. Human and marmoset sperm proteins 4.1 and 6.7 (see W88373-80) and nucleotide sequences (see X06772-79) encoding them are new. The proteins are sperm specific and can be used in a contraceptive vaccine to prevent or reduce fertility in a subject without the autoimmune reactions that are a serious side-effect of prior art female contraceptive vaccines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 85-89; 129pp; English.

Probes derived from the EPH-related PTKS Cek4 (Q90659) and Ce (Q90660) were used to isolate novel CDNA clones (Q90652-58, Q90661-62) from chicken embryo and embryonic brain libraries. Cek4 is highly expressed in the chicken developing brain and embryonic tissues and also in the adult brain and retina. Sequence 983 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein.

Disclosure; Fig 1; 121pp; English.

Disclosure; Fig 1; 121pp; English.

Entire sequence from T4-encoding plasmid p170-2. It is almost identical to the sequence published by Maddon et al. (1985) with the exception of three codon changes. At T4 amino acid residue 3, (posn. 403 of entire sequence) Lys is encoded in stead of Asn. At posn. 64, (posn. 464) Arg replaces Trp and at posn. 231, (posn. 631) Ser replaces Phe.

Soluble T4 can be produced by truncating the CDS to remove the transmembrane and cytoplasmic domains. The soluble forms may be
                                                                                                                                             ARC and HIV infection.

Disclosure; fig 1; 100pp; English.

The sequence differs from that determined by PJ Madden et al., [Cell, 42 pp. 93-104 (1985)] in three places due to three nucleotide substitutions. The Asp reported at position 3 by Madden et al. was the result of a sequencing error [DR Littman et al. Cell, 55, p.541 (1988)].

X = stop codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2268
                 The sequence was deduced from the cDNA insert of p170-2. Soluble T4 constructs may be produced by truncating this sequence fragments from position 400 to 799, removing the transmembrane and intracytoplasmic domains whilst retaining the extracellular region responsible for HIV binding. The sol. T4 is combined with an anti-
                                                                                                                                                                                                                                                                                                           Combinations of soluble T4 protein and anti-retroviral agent having synergistic activity in treatment and prevention of A
                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; Q03005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   misc_difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 misc_difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R04031 standard; protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          modified to increase their immunogenicity by addition of an adjuvant such as incomplete Freund's adjuvant. The T4 interferes with HIV/T4 interaction and elicits anti-soluble T4 antibody production. See also Q05608.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Treating or preventing AIDS, ARC or HIV infection administering an immunologically effective amt. of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  30
frame of human immunomodulatory protein BL-1 encoding cDNA (given in CV 30915). The present invention describes a plasmid which comprises a concleotide sequence (NS) that encodes:(a) an immunomodulating protein concleotide sequence (NS) that encodes:(a) an immunomodulating protein concleotide sequence (NS) that encodes:(a) an immunomodulating protein concleotide from interleukin (IL)-12, granulocyte-macrophage colony stimulating factor (GN-CSF), IL-1, tumour necrosis factor (TNF)-alpha, concleotide from interleukin (IL)-12, granulocyte-macrophage colony concleotide for the present invention can be concleoted to regulatory elements. Products of the present invention can be used to induce an immune response to an antigen such as a pathogen conclinked to cells associated with autoimmune diseases or an allergen. They can be used for immunotherapy or to provide a protective immune conclined to cells associated with autoimmune diseases or an allergen. They can be used for treating subjects with an allergic reaction, pathogen infection, hyperproliferative disease concertive immune diseases e.g. rheumatoid conclined an allergic reaction, pathogen infection, hyperproliferative disease concertive immune diseases e.g. rheumatoid concertive multiple sclerosis, Sjogren's syndrome, sarcoidosis, insuling spondylitis, scleroderma, polymyositis, dermatomyositis, psoriasis, conditis, Grave's disease, autoimmune thyroiditis, ankylosing conditis, Grave's disease, autoimmune thyroiditis, asthma and concertive disease, autoimmune disease and ulcerative disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

This is the amino acid sequence of porcine interferon alpha-1, as deduced from the open reading frame of a cDNA clone (see V68167). The invention provides bovine, murine, porcine, feline, laprine and rat mature alpha, beta and gamma interferons and their propeptides (see W63895-905, W63918 and W70582-85). Recombinant DNA methods can be utilised to prepare these non-human animal interferons in amounts sufficient to enable the determination of their blochemical properties and bloactivities, and hence to allow efficient production for commercial or biological exploitation.

Interferons are useful as antiviral and antitumour agents.

expressing human cytochrome p450 and a yeast NADPH-P450 reductase

PS Examples; Page 23-25; 124pp; English.

CC cDNA was amplified by PCR using the primers 087735-8. The product was

CC cloned into the yeast expression vectors pAAH5N or pAHRR to produce the

CC vectors p2C9 for the expression of the cytochrome P450 alone or p2C9R

CC for co-expression with the yeast NADPH-P450 reductase.

CC The vectors are used in a method for evaluating the safety of a chemical

CC compound by reacting the chemical compound with recombinantly produced

CC human cytochrome P450 molecular species and variants (087716) and

CC or 3A4 (087717), or their auxillary species and variants (087718-32), and

CC yeast NADPH-P450 reductase, either as a fused protein or in cell

CC extracts, and analysing the resulting metabolite to assess the safety of

Che chemical compound. The method is useful for determining whether and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This is the amino acid sequence of porcine interferon alpha-1, deduced from a cDNA (see V08184). The invention provides bovine, porcine, feline and rabbit mature interferons and their propeptides (see W7324-35). Recombinant DNA methods can be used to propeptides (see W7324-35). Recombinant DNA methods can be used to proper these non-human animal interferons in amounts sufficient to enable the determination of their blochemical properties and bloactivities, and hence to allow efficient production for commercial or blological exploitation. Interferons are useful as antiviral and antitumour agents. A replicable expression vehicle comprising claimed non-human animal interferon nucleic acid, a process for producing such an interferon, and a microorganism (especially Escherichia coli) or cell culture transfected with the nucleic acid are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present sequence is the human derived cytochrome (HDC)
P450209, which was obtd. from a commercial cDNA library. Yeast
were transfected with an expression vector contg. the HDC cDNA,
cultured and then disrupted to give a microsomal fraction. The
HDC was purified from the fraction, and used to immunise and
sensitise a mammal. Blood was drawn from the mammal, and an
anti-HDC antibody isolated. The antibody obtd. recognises HDC
P450209, partic. at a serum dilution rate of 1:10000, and is
substantially without cross reaction to other HDC P450 spp. .

CC This is the amino acid sequence of the human cytochrome P450 molecular CC species 209 protein. The corresp. gene was amplified from a human liver CC to generate plasmid p209 for prodn. of the yeast expression vector pAAH5N CC to generate plasmid p209 for prodn. of the cytochrome only or into the vector pAHFR to generate the plasmid p209R for co-prodn. with the yeast CC NADH-P450 reductase. The sequence is placed under control of the yeast CC ADH gene promoter and terminator.

CC The vectors are used in a method for evaluating the safety of a cpd. by reacting the test cpd. with recombinantly produced human cytochrome P450 cmol. species 1A2 (728380), 209, 201 (728382), 3A4 (728383) or their compliants (728384-98) together with yeast NADH-P450 reductase (either as a coll and the resultant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Claim 6; Pages 309-310; 989pp; English.

The present sequence represents a Staphylococcus aureus protein of unknown function. The DNA sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequences to control the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect

Treating B cell lymphoma with chimeric antibody - against CD20, causing rapid depletion of peripheral B cells, also new antibodies and hybridomas Disclosure; Fig 4; 101pp; English.

The sequence is the murine variable region light chain derived from murine anti-CD20 monoclonal antibody 2BS.

This protein comprises a novel human metabotropic glutamate receptor, designated mGluR8. Its amino acid sequence was deduced from cDNA clones isolated from a human foetal retina cDNA library.

The metabotropic glutamate receptors are linked to mutiple second messenger pathways. They function to modulate the presynaptic release of glutamate, and the postsynaptic sensitivity of the neuronal cell to glutamate excitation. Host cells transfected with especially RC7-18 host cells transfected with greynaptic sensitivity of the capacitally RC7-18 host cells transfected with pGT-hamGluR8, are claimed. They can be used in claimed methods for evaluating the effectiveness of a test compound for the treatment or prevention of a condition associated with a deficiency or excess of stimulation of the human mGluR8 receptor. mGluR8 agonists and antagonists can be used to treat neurodegenerative diseases, or as antipsychotic, antiemetic agents.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: WITHIN THE NERVOUS SYSTEM, EXPRESSION IS
RESTRICTED TO PROSOMERES 1 AND 2 IN THE DIENCEPHALON AND ALL THE
RHOMEOMERES IN THE HINDBRAIN DURING SEGMENTATION STAGES. LATER ON,
A SUPERIMPOSED PATTERN APPEARS THAT CORRELATES WITH THE FORMATION
OF SEVERAL AXONAL TRACTS. IN THE SOMITIC MESODERM, THE EXPRESSION
CORRELATES WITH SEGMENTATION AND THE GUIDANCE OF BOTH NEURAL CREST
AND MOTOR AXONS THROUGH THE SCLEROTOMES.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALLYTIC
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TYROSINE PHOSPHATE

                                                                                                   SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

DEVELOPMENTAL STAGE: MATERNALLY EXPRESSED, IT DECREASES AT MID BLASTULA TRANSITION AND REAPPEARS AT LATE NEUTULATION. EXPRESSED AT HIGHER LEVELS IN THE ANTERIOR AND DORSAL REGIONS OF EMBRYONIC STACES 16, 24 AND 37. IN ADULT IT APPEARS TO BE UBIQUITOUSLY EXPRESSED WITH HIGHER EXPRESSION IN BRAIN AND OVARY. EXPRESSION I THE BRAIN, BRACHIAL ARCHES, TRIGEMINAL FACIAL GANGLION, AND THE RETINA OF SWIMMING TADPOLE STAGE OF DEVELOPMENT.

SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC DOMAIN. BELONGS TO THE EBHRIN RECEPTOR FAMILY.

SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EISGVDEHYTPIRTYQVCNVMDHSQNNWLRTNWVPRNSAQKIYVELKFTLRDCNSIPLVL
